FORD F-100 PRO TOURING CHASSIS

CMB-0004

The Collino Pro Touring Chassis transforms the classic Ford F100 into a modern high-performance platform. Built from high-strength structural steel and engineered for precision, it delivers outstanding rigidity, geometry accuracy, and dynamic handling — all without compromising the truck's original soul. Designed for V8 Coyote front-engine, rear-wheel-drive configurations, it features C-Truck adjustable coilover suspension mounts, a fully tunable Four-Link rear system with Watts linkage, and complete alignment adjustability at both ends. Each chassis is manufactured under the Collino Motors Pro Touring Series, ensuring tight tolerances, MIG-welded structure, and repeatable geometry. The result: a timeless F100 with the control and response of a modern sports car.
